

# Camera Device Pack

**Camera Device Pack (CDP)** is a license system of ACTi NVR to support other manufacturers' cameras for special project purposes.

**New projects** The CDP is used to include very specific third party cameras with the specifications that are not covered by ACTi product line.

**Existing projects** The CDP is used to expand or migrate to ACTi solution while keeping the previously installed third party cameras.

## Solution Architecture

## Supported Network Video Recorders

The Camera Device Pack is available in following NVR products:

NVR Product	Software Version
NVR 3.0	3.0.02.35 or newer
GNR-Series Standalone NVR	3.0.02.35 or newer
ENR-Series Standalone NVR	3.02 or newer

## Other Supported Software

Any other ACTi VMS Service, such as CMS, TV Wall, Mobile Client, etc, will be able to support the third party cameras as long as the NVR itself supports them.

## Download and Install CDP

CDP is automatically installed during the NVR Server installation or upgrade process.

## The License Management

The license is required for each non-ACTi camera. The CDP license system is independent from ACTi camera license system, and it does not affect the available free licenses for ACTi IP products.

The total number of ACTi and non-ACTi cameras must not exceed the allowed maximum of NVR server.

## Which Third Party Cameras Are Supported by ACTi VMS?

You may use the Third-party Camera Integration Validator tool at <http://www.acti.com/3rdpartycamera> to check the list of supported third party cameras.

The integration is based on ONVIF, however, ACTi guarantees the integration readiness only for the models listed in the tool above.
